

Project Title

Tic-Tac-Toe AI using Python

Project Description

This project is a simple Tic-Tac-Toe game developed using Python. It allows a user to play against the computer in the terminal. The AI uses the Minimax algorithm to make intelligent moves and provide a challenging gameplay experience.

Objectives

- Develop a Tic-Tac-Toe game using Python.
- Implement the Minimax algorithm.
- Improve logical thinking and programming skills.

Features

- Human vs Computer gameplay.
- Smart AI using Minimax.
- Win, Lose and Draw detection.
- Beginner-friendly interface.

Technologies Used

Python 3
Visual Studio Code

How to Run

Open the project in VS Code, run `tic_tac_toe.py`, and enter positions from 1 to 9 to play.

Output

The game displays the board after every move and announces the final result.

Conclusion

This project enhanced my understanding of Python, game development, and Artificial Intelligence concepts.
